Software Engineer internship: Take home test

Using HTML + CSS + JS recreate layout of https://www.finder.com.au/ home page section attached below.
- Each tile with an image should redirect to https://www.finder.com.au/.
- "Show more categories" link should expand the section and show additional images
- "Show less categories" link should collapse the expanded section

In case the component is no longer available on site, please refer to the screenshots only for layout and use any images in the tiles.
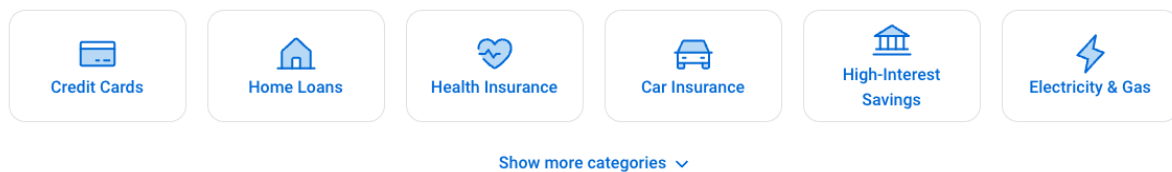

The resulting code can be sent via email as a .zip package, as a repository on GitHub or using stackblitz.com
Will evaluate the task by the compatibility of the layout with the screenshot, we will not focus on the icons used or precise color match. Bonus points for responsive design, React.js.

Section to recreate, initial view:

Join 2 million+ Australians finding better

Finder's team of 40+ experts will help you find the right choices in over 100 categories.

| Credit Cards | Home Loans | Health Insurance | Car Insurance | High-Interest Savings | Electricity & Gas |
